

Wolf Packaging Machines is one of the leading manufacturer of VFFS, as well as complete packaging lines for the food industry.

With more than 2500 systems installed worldwide, and subsidiaries in China, Thailand, Malaysia, Indonesia and the Phillipines, we can provide service for the entire Asian region.

Intermittant and continous working VFFS with a bag width of 20mm up to 650 mm, and output speeds of up to 220B/min, as well as complete "Turn Key lines" are what we tailoring for our customers.

With a wide range of different VFFS machines, Wolf has the perfect solution for every application. If you want to pack potato chips, candy, frozen food, spices, milk powder or any other food product, Wolf will supply the right application for any packaging.

The EPS model has been especially developed for packing snacks, candy, nuts and similar products. The body frame is designed to integrate a multiheadweigher and a inline metal detector on the smallest floorspace possible. This fully servo driven continuous motion bagger does pack extruded snacks on speeds up to 130B/min, and potato chips up to 100B/min.

Powder is probably the most difficult product to fill into a flexible bag on a descent output rate! To achieve the highest filling accuracy and highest output speed, the auger feeder, and vertical bagger from Wolf, which are all made according to the highest hygienic standards, cover both. Participate of our experience in powder filling for more than 25 years.

Verpackungsmaschinen GmbH

Entirely made of stainless steel, wash down and IP 65, are just some of the keyfacts of our baggers dedicated to the frozen food or liquid industry. Up to a bag width of 450mm, The Wolf stainless steel baggers, can handle heatsealable laminates, as well as plain LDPE on speeds of up to 120B/min.

Standup bags with clip closure or tintie, double or single folded top seams, card board attachments, or filling of fragile products on the lowest product dropping height, are just some of the advantages the KVM machine offers. In single or duplex execution, with speeds up to 100B/min, the KVM is the allrounder of our VFFS machines.

Total filling line solutions made by Wolf. Along with our partners, which are all leaders in their specific segment of the packaging industry, we will engineer a total filling line for your specific packaging requirement. From the silo to the palletizer, all out of one hand, and just a single point of contact down the whole line.
